Wisnu Falah

Founder & product builder, INDOWYSS

Building systems around how a business works.

From everyday work to management decisions. I am building INDOWYSS to connect records, workflows and evidence-based recommendations; the same approach can be developed around your company's needs.

INDOWYSS is my main project: one ecosystem connecting operations, an automated Manager, cross-business promotions and collective purchasing. These are selected workflows that have been built.

INDOWYSS / OWNER

Pusat kendali

5 tindakan hari ini menunggu keputusan.

Hari Ini 5 Rencana Usaha 5

1 permintaan menu menunggu persetujuan. [Tinjau permintaan](#)

Tugas Hari Ini 2 mendesak

- Kas & kontrol**
Risiko uang kas, margin, dan pencatatan omzet tidak cocok.
- Kas & kontrol**
Minus berulang perlu ditutup dengan review bukti kas sebelum jadi kebiasaan operasional.
- Stok & supplier**
Risiko menu tidak bisa dijual pada jam ramai.
- Stok & supplier**
Risiko HPP dan stok aktual tidak akurat.
- Operasional**
Order tertahan bisa mengganggu closing dan antrean.

[← Kembali ke daftar](#)

Mendesak · Kas & kontrol

Risiko uang kas, margin, dan pencatatan omzet tidak cocok.

BUKTI YANG TERCATAT

Refund/void minggu ini 4 kejadian, nilai terdampak Rp 126.000.

KEPUTUSAN BERIKUTNYA

Review alasan refund/void, cocokkan dengan bukti transaksi.

[Cek refund & void](#) [✓ Sudah review transaksi](#) [Opsi lain](#)

Rekomendasi ini berguna? [👍](#) [👎](#)

INDOWYSS product interface · presentation data, not customer results. Original Indonesian UI.

Explore INDOWYSS

01 / Decisions & costs

Check the numbers before adding a cost.

Simulations combine business records with owner-entered assumptions to compare additional costs with the sales needed to cover them. Assumptions remain distinct from observed results.

Coba hitung sebelum memutuskan

Biaya menu dari catatan Anda. Perkiraan penjualan dari Anda.

Biaya baru lainnya per minggu, selain gaji (Rp)

0

Misalnya ongkos atau listrik tambahan. Jangan masukkan biaya lama; jika tidak ada, isi 0.

☒ Saya sudah memeriksa biayanya. Jumlah penjualan ini masih perkiraan.

Hitung simulasi

Perkiraan tambahan penjualan belum menutup gaji dan biaya baru.

Perkiraan Anda: 6 porsi tambahan/minggu; karyawan 9 jam/minggu dengan gaji Rp 15.000/jam.

PERKIRAAN · 1 MINGGU

Masih kurang per minggu

Rp 76.074

Untuk menutup biaya baru: minimal **14 porsi tambahan/minggu**.

Berdasarkan perkiraan penjualan Anda, bukan hasil yang sudah terjadi.

Bukti dari catatan menu

Kopi Susu Demo: harga jual saat ini Rp 16.000/porsi.

Bahan dan biaya langsung resep: Rp 6.179/porsi.

Keputusan

Bandingkan jadwal kerja atau biaya lainnya. Pastikan tambahan penjualan yang dibutuhkan masuk akal sebelum menambah karyawan.

▶ Simulasi · rincian hitungan

▶ Dasar dan batas hitungan

Simpan sebagai rencana

INDOWYSS product interface · presentation data, not customer results. Original Indonesian UI.

Calculations can be checked; AI does not invent the figures.

Important changes remain subject to human decisions.

02 / Review results

The workflow continues after a recommendation.

Recorded trials can be reviewed after 7, 14 or 28 days. INDOWYSS compares before-and-after records and explains the observed changes.

Improved result

Percobaan karyawan paruh waktu: hasil meningkat

Naik Rp 106.388

Uji 7 hari

Mulai 25 Jul 2026

Hasil usaha meningkat selama percobaan.

Naik Rp 106.388

Dibandingkan 7 hari sebelumnya, setelah biaya menu dan tambahan part-time dikurangi.

Langkah berikutnya

Pantau satu minggu lagi sebelum menambah biaya. Pastikan kondisi kedua periode sebanding.

Belum laba bersih. Perubahan ini belum tentu disebabkan oleh tindakan Anda.

Lihat hitungan

Ubah biaya tambahan

Declining result

Percobaan karyawan paruh waktu: hasil menurun

Turun Rp 74.653

Uji 7 hari

Mulai 8 Agu 2026

Hasil usaha menurun selama percobaan.

Turun Rp 74.653

Dibandingkan 7 hari sebelumnya, setelah biaya menu dan tambahan part-time dikurangi.

Langkah berikutnya

Cek jumlah terjual dan biaya baru. Coba jadwal, harga, atau cara kerja yang berbeda lewat simulasi ulang.

Belum laba bersih. Perubahan ini belum tentu disebabkan oleh tindakan Anda.

Lihat hitungan

Ubah biaya tambahan

INDOWYSS product interface · presentation data, not customer results. Original Indonesian UI.

Examples of both improved and declining results.

A comparison alone does not prove causation or net profit.

03 / Company applications

Start with the process that holds work back.

An ERP, CRM or internal application need not start by replacing every system. These are examples of scopes that can be designed around a company's needs, not claims of deployed enterprise modules.

Inventory & purchasing

Connect item requests, approvals, receiving and price history.

Measure: processing time and inventory-record accuracy.

Sales & customers

Clarify lead ownership, follow-ups, visits and quotation status.

Measure: timely follow-ups and complete lead statuses.

Work & approvals

Track tasks, owners, deadlines and completion evidence.

Measure: overdue work and approval waiting time.

Management control center

Bring together priorities, exceptions and process summaries linked to source records.

Measure: report preparation time and clarity of follow-up actions.

Integration with an existing ERP, migration, security, service costs and support are scoped after reviewing requirements and technical access. Machine-safety systems and industry-specific compliance require separate expertise and validation.

04 / Working together

From understanding the work to testing the result.

I develop INDOWYSS independently, using AI assistance for code, documentation and testing. My contribution spans requirements mapping, workflow and interface design, rule definition, implementation coordination and result verification.

Direct experience in retail, sales and F&B helps me understand the people doing the work. INDOWYSS began with a manual-recording pilot for small F&B businesses in Batam and developed into a digital system.

Map the process

Identify who does what, which data is needed, who approves it and what counts as completion.

Build the working experience

Connect forms, statuses, priorities and permissions, with interfaces adapted for phones and computers.

Connect data & decisions

Validate inputs, calculate indicators, explain evidence and prepare next steps. Use AI where appropriate, without replacing controls.

Test workflows & risks

Test scenarios, repeated requests, concurrent changes and access restrictions. Start a rollout with a scope that can be verified.

Clear scope. Test first. Then expand.

Choose the problem / Prove one workflow / Handover & review

Discuss a project: [+62 819-1024-9645](tel:+6281910249645)

Screenshots use a presentation account with simulated data. No paying INDOWYSS outlets have been reported. F&B is the initial product; restaurant and retail are in development. The showroom application has its own scope. This portfolio does not claim SAP/Odoo implementation experience, industry certifications or unverified commercial results.
